

MATHEMATICS TUTORING

Private Mathematics Tutoring Sessions

The private tutoring sessions are designed to help students develop their mathematical skills. It will allow students to work one-on-one for an hour to practice important concepts and topics relevant to their grade level.

Session Objectives

Each session will cover mathematical skills using a combination of both SLK learning materials, school textbooks, and homework from school, if applicable. Students who actively participate in the lessons and practice at home will be able to improve their grades and test scores while building their confidence in the subject.

Youth and younger children start by learning basic concepts, such as addition and subtraction. As their mathematical skills progress, students learn more difficult concepts and learn to apply these concepts with practical applications. For adult students, we are also able to assist with more difficult levels of math, such as Trigonometry, Calculus, etc.

Readiness with Upper Grade Levels

The topics and skills taught in the sessions will prepare students for advanced math courses and assessments that measure critical thinking and reasoning.
